

Special Event Planning **Amplified Sound**

The City of Stockton Community Service Department is responsible for receiving and approving event applications involving amplified sound (i.e. PA system, bull horn, sound system or any sound amplifying equipment) during an organized event. Listed below are items that should be considered in determining placement of amplified sound:

- The level of noise
- The proximity of noise to residential areas
- The time of day and night the noise will occur
- The duration of the noise

NOTE: Event organizers may be required to provide event information to area residents and business that could be impacted by the amplified sound. Also, amplified sound may only be conducted during the approved times listed on the event permit/contract.

Approval and conditions of amplified sound within your event's footprint/venue will be given once all event requirements have been met. You may be required to lower or discontinue the amplified sound if it is deemed offensive or excessive.
